

BIM Workshop

Meet the Keepmoat (BIM) Team

Oxford Road Housing Development Special

Free to attend 22 February 2016, 8am to 12:30.
Sandwell Council House, Annexe 1 Council Chambers, Freeth Street, Oldbury,
West Midlands B69 3DB

Helping to build your business with BIM

For construction firms, manufacturers and component suppliers wishing to work on public-sector projects, BIM (Building Information Modeling) is no longer a “nice to have” but an essential deliverable.

As part of a small group, you'll gain essential knowledge on adopting BIM within your business. Find out how it could significantly increase your market reach, improve your business work-winning skills and help you exploit new markets. During this morning session, BIM experts and total beginners (and the rest of us in between!) can share BIM lessons learned, challenges faced and pitfalls to avoid.

Sandwell Council's BIM focus workshop is ideal for business owners, directors, product designers and senior business development managers.

Attending this workshop will allow you to:

- Learn about Sandwell Council's BIM strategy aligned to its regeneration projects
- Meet design decision-makers and specification experts from leading UK housing developer – Keepmoat, who are involved in £multi-million cross-region housing schemes (including Sandwell's new Oxford Road development in West Bromwich)
- Meet industry experts already tasked with implementing digital engineering & BIM technology
- Hear about relevant financial support (subject to eligibility) for developing your BIM technology skills and BIM Objects to allow sharing of product data between clients, designers and principal contractors
- Network with likeminded business professionals including engineers and product designers from your sector.

It's free to attend and demand for places will be high. Sign up now by emailing Sandwell Council's Steve Massey: (stephen_massey@sandwell.gov.uk) or telephone Steve on 07929 353232
